# TAURANGA GIRLS COLLEGE YEAR 10 HOMEWORK SHEET 

## Series B Sheet 4

TGC Values: Respect, Participation, Pride

## KEY SKILLS:

1. In the number 567.123 what digit is in the hundredths column?
2. Round 0.385 to the nearest tenth
3. Write eigteen hundredths as a decimal
4. Insert < or > to make it a true statement:
0.045 $\qquad$ 0.047
5. What are the first five multiples of 9 ?
6. List all the factors of 28
7. Complete this equivalent
fraction: $\frac{2}{5}=\frac{}{35}$
8. What fraction is shown by the point $B$ on the number line below?
9. Write $\$ 450$ as a percentage of \$4000
10. Divide $\$ 30$ in the ratio $2: 3$
$\qquad$

## CURRENT WORK (CL 4 - 5): Statistics (You can use a calculator)

Data Analysis -Middle and Spread
Miss Jones, the PE teacher for 10DFG, has recorded times it took the girls in the class to run 50 metres as a box plot.

|  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- |
| 0 |  |  |  |  |

2. What percentage of the class took more than 11 seconds? $\qquad$
3. What was the range of times? $\qquad$
4. What was the lower quartile time? $\qquad$
5. What was the interquartile range of times? $\qquad$

## Data Analysis - Comparing Middle and Spread

James is in Year 7. He decided to ask people in his class how many times they had been to the movies this year. He decided to record the results for the boys and girls separately:
He wrote the data in order from the least to the greatest:
Boys $0,0,0,0,1,1,1,1,2,2,2,2,2,2,3$

$$
\begin{array}{|l|l}
\hline \text { Girls } & 0,0,1,1,2,2,2,3,3,3,4,4,4,5 \\
\hline
\end{array}
$$

Complete this table of statistics for the number of times each group had been to the movies this year:

|  | Median | Range |
| :--- | :---: | :---: |
| Boys |  |  |
| Girls |  |  |

Complete these sentences using your statistics:
The median number of times the boys went to the movies this year is $\qquad$ and the median number of times the girls went to the movies this year is $\qquad$ . This tells us that on $\qquad$ the girls went to the movies $\qquad$ than the boys this year.

The range for the number of times the boys went to the movies this year is
$\qquad$ and the range number of times the girls went to the movies this year is
$\qquad$ . This tells us that the overall $\qquad$ for the number of times the girls went to the movies was $\qquad$ than the boys.
$\qquad$

## CURRENT WORK (CL 5): Statistics (You can use a calculator)

Use the following four dot plots were constructed from the data from 500 New Zealand students involved in the Census at Schools survey:

1. What was the age of the oldest student who participates? $\qquad$
2. What was the most common number of languages spoken? $\qquad$
3. Which graph(s) has a shape that is:
a) Symmetrical
c) Skew
b) Bimodal
d) Uniform
4. Complete these sentences
a) The distribution of the neck circumferences is roughly $\qquad$ with a centre around $\qquad$ cm . The shape is roughly bell-shaped and range from around $\qquad$ cm to around $\qquad$ cm
b) The distribution of the hair lengths is $\qquad$ with peaks at around
$\qquad$ cm and $\qquad$ cm . This data is probably bimodal because there are two groups who tend to have different length hair. Those two groups are $\qquad$ and $\qquad$ .
$\qquad$

## FURTHER CURRENT WORK (CL 5): Statistics

This box plot gives the resting pulse rate per minute for two groups, A and B.

## Middle:

The median resting pulse rate for group A is $\qquad$ bpm, and the median boys jump length is $\qquad$ bpm . This shows that on average group A have a $\qquad$ resting pulse rate than $\qquad$ .

When you look at the middle $50 \%$ (the box), the resting pulse rate for group $\qquad$ is much further up the scale than the resting pulse rate for group $\qquad$ . This shows that for this data the middle $50 \%$ of $\qquad$ tend to have a $\qquad$ resting pulse rate than the middle $50 \%$ of
$\qquad$ .

## Spread:

The resting pulse rate range for group $A$ is $\qquad$ bpm and the resting pulse rate range for group B is $\qquad$ bpm. This shows the overall spread of the resting pulse rates is $\qquad$ than for group A than group B.

The IQR resting pulse rate for group A is $\qquad$ bpm and the IQR for the resting pulse rate for group $B$ is $\qquad$ bpm. This shows the $\qquad$ of the resting pulse rates for the middle $50 \%$ is $\qquad$ for group A than group B.

Current Work CL5 (2): $\qquad$ /17
Overall Results:

| KS | CL4-5 | CL5(1) | CL5(2) | Total | Parent Signature: |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |
| 18 | 17 | 15 | 17 | 67 |  |
