## APPLICATIONS and TASKS

For each of these tasks you must show your working. Set out your solution in a clear and ordered manner. It is a good idea to draw a sketch for each situation. Read the question carefully.

Task One (2 marks)
A ladder is 4.5 m in length is leaning against the wall. The angle between the ladder and the wall is $27^{\circ}$. Calculate the height the ladder extends up the wall.

Task Two (2 marks)
A man is lying on a cliff top. He looks down at an angle of depression of $47^{\circ}$ and sees a boat 500 m away from the base of the cliff. How high is the cliff?

Task Three (2 marks)
A girl 1.65 m tall looks up at the top of J block.
She is standing 15 m away and looks up at an angle of elevation of $48^{\circ}$. How tall is J block?
